Ms. Shannon Heafey, Air Quality Permits Program
Air and Radiation Administration
Maryland Department of the Environment
1800 Washington Blvd.
Baltimore, MD 21230

Dear Ms. Heafey,

RE: Sierra Club opposition to issuance of an air permit to W.R. Grace for the chemical recycling of plastic waste, Docket #16-23

We are writing in opposition to issuance of an air permit for W.R. Grace's proposed Research-Scale Pilot Plant for chemical recycling of plastic. Based on commissioned expert technical and regulatory review of the application, the project has not been shown to be in compliance with all applicable federal Clean Air regulations, specifically Section 129 of the Clean Air Act, which regulates emissions from combustion of solid waste.

Approval criteria

At the public hearing held on April 29, 2024, Susan Nash, the MDE air quality engineer assigned to review the application, presented the following technical criteria for approval of the air permit for W. R. Grace. It must:

1. Operate in compliance with all applicable federal and state air quality regulations.
2. Operate so as to prevent discharges of emissions that create a nuisance beyond property lines.
3. Operate with a limit on average throughput of 1 kg/hr daily and 4000 kg/year of plastic feedstock.
4. Power all equipment with electricity.
5. Control emissions from the Product Recovery System with an electric flameless thermal oxidizer.
6. Implement good operating practices designed to minimize emissions of VOC.

It also requires certification that the W.R. Grace campus has the zoning that permits them to conduct these experiments.

This pilot project incinerates plastic and is subject to the U.S. EPA's Other Solid Waste Incineration rule. According to the attached technical review of the W.R. Grace application by Dr. Ranajit Sahu, who holds a Ph.D. in Mechanical Engineering with a focus on pyrolysis and combustion, the reactor, which is claimed to be "oxygen-free," appears to be a pyrolysis unit (Exhibit A). He notes that "The absence of oxygen...is an aspirational goal, because it is not

possible to eliminate the presence of all oxygen in real world pyrolysis units. Thus, the Application's description that the reactor will be "oxygen-free" is not practically possible." "Pyrolysis/gasification is therefore the first stage or first step in combustion."

The declaration provided by regulatory expert Jane Williams (Exhibit B) states that the facility proposed by W.R. Grace meets the criteria for an incinerator on three counts: (a) it is combusting solid waste; (b) the EPA considers plastic a solid waste; and (c) off-gases will be treated by a thermal oxidizer

She notes that the federal Clean Air Act defines the term "solid waste incineration unit" as "any facility which combusts any solid waste" and that the incinerator that W.R. Grace is planning to construct is covered by the U.S. Environmental Protection Agency's Other Solid Waste Incineration (OSWI) Rule because "it plans to burn plastic in a facility that has less than 35 tons per year of throughput and meets the definition in the OSWI Rule of a very small municipal waste incinerator."

Further, per Ms. Williams' declaration, W.R. Grace's pyrolysis unit will have to comply with federal Clean Air Act Section 129, which addresses emissions from solid waste combustion. We did not see any mention of compliance with Section 129 of the federal Clean Air Act in W.R. Grace's application or MDE's tentative determination for the permit. On that basis, the project cannot claim to be compliant with all relevant federal Clean Air Act regulations.

We have sent a request to Lynda Eisenberg, Director of the Howard County Department of Planning and Zoning, to retract the Certificate of Compliance issued on September 21, 2023 because this pilot project is both a small incinerator and a waste processing facility; neither of these are permitted uses in the Planned Employment Center (PEC) District under the Howard County Zoning Regulations.

Finally, we are concerned about the lack of more detailed information on the process and evidence to support the assumptions behind the estimates in the application (Exhibit A, paragraph 3). In modeling impacts, one can get whatever result one wants simply by the choice of assumption. Dr. Sahu, who has read many such proposals, has found inadequate detail to evaluate many aspects of the project or the reasonableness of the assumptions. If this application is re-submitted, we request that MDE require greater detail from the applicant on the process and justification for the assumptions.

Sincerely,

**WR Grace Plastics Conversion Pilot Plant Application
Columbia, MD**

Comments by Dr. Ranajit (Ron) Sahu

1. My name is Dr. Ranajit (Ron) Sahu. A copy of my resume is provided in Attachment A to these comments. I have a Bachelor's of Technology degree in Mechanical Engineering from the Indian Institute of Technology (IIT) followed by M.S and Ph.D degrees in Mechanical Engineering from the California Institute of Technology (Caltech). My Ph.D work focused on pyrolysis and combustion, which are directly relevant to these comments.
2. I have reviewed the Maryland Department of the Environment (MDE) Application for a Permit to Construct a research-scale pilot plant by WR Grace & Company at the facility in Columbia Maryland. Per the August 3 2024 cover letter accompanying the Application, the stated purpose of this facility would be to "test catalytic chemical conversion of plastics process." This catalytic conversion reaction will occur "at high temperature, in an oxygen-free environment" and will require the addition of heat. The conversion reaction will produce "a product vapor comprised of non-condensable gas and condensable liquid." This product vapor, after removal of residual catalyst, will go through a product recovery system involving vapor condensation and gas/liquid separation. Finally, the separated non-condensable gas will go through an electric flameless thermal oxidizer prior to venting to the atmosphere. The condensed liquids will be collected and shipped to a third party for waste treatment.
3. The Application does not contain much additional details. For example, the types of plastics that will be converted are not described. The amount of heat to be added to the reactor and the temperature of the reactor across the range of plastics to be converted are not described. The composition of the product vapor is not described across the range of plastics to be converted. Rather, in Table 1 (Application, pdf 42) a product gas composition is provided based on "engineering estimates." The basis of this engineering estimate is not clear at all and it is not clear therefore, if the composition provided in Table 1 is relevant for all types of plastics that will be converted/studied in this pilot plant. The notes accompanying Table 1 also contain numerous additional assumptions regarding: the VOC control efficiency of the flameless electrical thermal oxidizer ("greater than 99.99%...", but curiously missing any minimum temperature that will achieve and maintain this high destruction efficiency across the range of product vapor compositions); as well as the 99% particulate control efficiency. It is not clear how these assumptions will be verified on a continuous basis.
4. Significantly, while the Application does not state so, the reactor – given its oxygen "free" condition and heat addition, appears to be a pyrolysis unit.
5. Theoretically, pyrolysis is the chemical decomposition of typically organic (i.e., carbon-based) materials, like the plastics that will presumably be converted in this proposed pilot plant, via the application of heat but in the absence of oxygen. The absence of oxygen, however, is an aspirational goal, because it is not possible to eliminate the presence of all oxygen in real-world pyrolysis units. Thus, the Application's description that the reactor will be "oxygen-free" is not practically possible.

6. In general terms, all materials that can be pyrolyzed/gasified contain some oxygen or oxygen compounds. I presume that some oxygen may be present in the plastics in this instance. Also, if the pyrolysis chamber or container may not be perfectly sealed and maintained at greater than atmospheric pressure, in which case external oxygen can be introduced into the pyrolysis process. For both reasons, it is impossible to operate a pyrolysis unit in the absence of all oxygen. That would be true of this proposed pilot plant as well.

7. As the temperature of plastic materials that are to be pyrolyzed/gasified is increased in order to effect the pyrolysis/gasification, the presence of some of the inherent oxygen in the plastic materials and/or any externally introduced oxygen will initiate combustion reactions while pyrolysis/gasification is going on. Thus, some combustion is impossible to avoid in the proposed reactor.

8. Pyrolysis/gasification is therefore the first stage or first step in combustion. Heat causes the waste materials to release volatile organic materials which then react with available oxygen (always present to some degree), releasing more heat and causing the formation of carbon dioxide and carbon monoxide along with other products of complete and incomplete combustion. The product vapors from the reactor will contain all of these pollutants.

9. I would urge the MDE to therefore properly characterize this reactor and to also ask WR Grace for additional details I have noted in paragraph 3 above before processing this Application.

10. I would also note that WR Grace has characterized this pilot plant as a R&D operation. Presumably, at some point data collected in this pilot plant stage may be used for scaling up the facility to commercial-scale. Therefore obtaining accurate emissions data from the pilot plant is very important. While physical scale-up of chemical reactors does not always similar scale the emissions from the facility, in this instance, the use of the electrically-heated thermal oxidizer adds a new complexity. The MDE should ask, if the pilot project is likely to be deemed a success and would therefore be scaled-up, whether Grace would similarly scale up the electrically-heated thermal oxidizer or instead choose to use a more typical thermal or catalytical oxidizer heated using natural gas. In which case, the emissions profile from the pilot plant would, of course, not be the same as from an actual, commercial-scale, facility.

EXPERIENCE SUMMARY

Dr. Sahu has over thirty two years of experience in the fields of environmental, mechanical, and chemical engineering including: program and project management services; design and specification of pollution control equipment for a wide range of emissions sources including stationary and mobile sources; soils and groundwater remediation including landfills as remedy; combustion engineering evaluations; energy studies; multimedia environmental regulatory compliance (involving statutes and regulations such as the Federal CAA and its Amendments, Clean Water Act, TSCA, RCRA, CERCLA, SARA, OSHA, NEPA as well as various related state statutes); transportation air quality impact analysis; multimedia compliance audits; multimedia permitting (including air quality NSR/PSD permitting, Title V permitting, NPDES permitting for industrial and storm water discharges, RCRA permitting, etc.), multimedia/multi-pathway human health risk assessments for toxics; air dispersion modeling; and regulatory strategy development and support including negotiation of consent agreements and orders.

He has over thirty years of project management experience and has successfully managed and executed hundreds of projects in this time period. This includes basic and applied research projects, design projects, regulatory compliance projects, permitting projects, energy studies, risk assessment projects, and projects involving the communication of environmental data and information to the public.

He has provided consulting services to numerous private sector, public sector and public interest group clients. His major clients over the past three decades include various trade associations as well as individual companies such as steel mills, petroleum refineries, chemical plants, cement manufacturers, aerospace companies, power generation facilities, lawn and garden equipment manufacturers, spa manufacturers, chemical distribution facilities, land development companies, and various entities in the public sector including EPA, the US Dept. of Justice, several states (including New York, New Jersey, Connecticut, Kansas, Oregon, New Mexico, Pennsylvania, and others), various agencies such as the California DTSC, and various cities and municipalities. Dr. Sahu has executed projects in all 50 US states, numerous local jurisdictions and internationally.

In addition to consulting, for approximately two decades, Dr. Sahu taught numerous courses in several Southern California universities as adjunct faculty, including UCLA (air pollution), UC Riverside (air pollution, process hazard analysis), and Loyola Marymount University (air pollution, risk assessment, hazardous waste management). He also taught at Caltech, his alma mater (various engineering courses), at the University of Southern California (air pollution controls) and at California State University, Fullerton (transportation and air quality).

Dr. Sahu has and continues to provide expert witness services in a number of environmental and engineering areas discussed above in both state and Federal courts as well as before administrative bodies (please see Annex A).

EXPERIENCE RECORD

2000-present **Independent Consultant.** Providing a variety of private sector (industrial companies, land development companies, law firms, etc.), public sector (such as the US Department of Justice), and public interest group clients with project management, environmental consulting, project management, as well as regulatory and engineering support consulting services.

To Whom It May Concern:

I am Jane Williams, Chair of the Sierra Club National Clean Air Team. I have been a Sierra Club member for over 25 years and have served on the Clean Air Team for much of that time. As part of my duties, I routinely litigate on federal Clean Air Act rules and my team has been very active shaping policy and enforcing the federal Clean Air Act, Section 129 rules and the Definition of Non-Hazardous Solid Waste rule which govern the combustion of solid waste and incinerator emissions. One of these incinerator rules is the Other Solid Waste Incineration Rule (OSWI Rule).

My Clean Air Team initiated litigation challenging the final EPA OSWI rule because it left the toxic emissions from different types of waste incinerators unregulated or under-regulated. 70 Fed. Reg. 74870 (December 16, 2005). <https://www.epa.gov/stationary-sources-air-pollution/other-solid-waste-incinerators-oswi-new-source-performance#rule-history>.

The incinerator the W.R. Grace facility is planning to construct is covered by this OSWI rule since it plans to burn plastic in a facility that has less than 35 tons per year of throughput and meets the definitions in the OSWI rule of a very small municipal waste incinerator.

Previously, EPA has argued that it has broad discretion to decide which types of incinerators to regulate under the Clean Air Act's incinerator provision, 42 U.S.C. 7429. 70 Fed. Reg. at [74874-74875](#). However, the Clean Air Act requires EPA to set emission standards for "each category of solid waste incineration units." 42 U.S.C.7429(a)(1)(A). It further provides that the term "solid waste incineration unit" means "any facility which combusts any solid waste" with a narrow exception for certain types of materials recovery facility and power production facility. 42 U.S.C. 7429(g)(1).

Because the Clean Air Act requires EPA to issue standards for all facilities that combust any solid waste (and plastic is considered solid waste), except for those units expressly exempted by Congress, neither the EPA nor the states can exempt any other categories of incinerator without exceeding their authorities under the federal Clean Air Act. The state of Maryland has been granted authority by the the EPA to implement the federal Clean Air Act. [<https://www.federalregister.gov/documents/2012/06/20/2012-15018/delegation-of-authority-to-the-state-of-maryland-to-implement-and-enforce-additional-or-revised>.]

On June 5, 2023, EPA withdrew its proposal to exempt pyrolysis units burning plastic from Section 129 of the Clean Air Act after a nationwide campaign by the Sierra Club and other allies. Final action to exempt these pyrolysis units from the Clean Air Act was never taken by the agency, so any pyrolysis unit built or proposed to be built has a duty to comply with the federal Clean Air Act Section 129 regulations and that duty has been continuous. EPA has argued in the past that because some types of incinerators (e.g. agricultural waste incinerators) recover energy from the combustion process, they are not incinerators subject to regulation under 42 U.S.C. 7429. 70 Fed. Reg. at [74875-74877](#). That argument also is without merit. The Clean Air Act states precisely which types of energy recovery units are exempt from regulation as incinerators, and the unit proposed at W.R. Grace is not one of those units.

The facility proposed by the W.R. Grace company is clearly an incinerator since it meets a number of the criteria of an incinerator:

1. By combusting solid waste: since despite the assertion by W.R. Grace that the process is not oxidation, the waste itself entering the facility contains oxygen,
2. Plastic is considered a solid waste by the EPA under the Resource Conservation and Recovery Act,
3. Offgases from the process are being treated by a thermal oxidizer.

Both the text and legislative history of the Clean Air Act indicate that Congress intended section 7429 to cover all facilities that combust solid waste, except those expressly exempted by Congress. Since Congress did not expressly exempt these small units combusting plastic and other wastes from the Clean Air Act, they are still covered by the Act and need a Section 129 Clean Air Act permit. Indeed, subsequent court decisions have affirmed that Congress did intend to regulate these small facilities burning waste. [See *Sierra Club v. EPA*, 167 F.3d 658, 662 (D.C. Cir. 1999) (standards must reflect actual performance of best performing units).]

In summary, the Sierra Club has been very active since the 1990 Clean Air Act amendments were enacted ensuring that the intent of Congress to have EPA regulate the emissions of all different types of incinerators is realized. We have taken these actions specifically to ensure that if incinerators are built that health protective emission limits apply and that these facilities remain regulated by the federal Clean Air Act.
