

## Sierra Club California 2024 Report Card

## 2024: Confronting Deficits, Diversions, and Deadlines

2024's legislative session was filled with environmental wins, setbacks, and notable achievements. Throughout the session, Sierra Club California worked with a diverse coalition of environmental advocates to champion bills aimed at protecting California's communities and environment. Together, we sought to address critical issues such as water rights, pollution reduction, and conservation while emphasizing environmental justice to ensure marginalized communities have a voice in protecting their health and environment. We worked until the clock struck midnight at the end of the session on August 31st. However, the legislature couldn't complete their full docket, and left several important initiatives unresolved.

This year, Sierra Club California closely monitored a total of 461 bills either introduced in 2024 or carried over as two-year bills from 2023. We placed our support behind 99 of these bills and a total of 59 of them were sent to the Governor's desk for a signature. We also advocated against 43 environmentally harmful bills. Of the bills we opposed this year, only 9 made it to the governor's desk. Several of these harmful bills that reached the governor arrived in much weaker forms than when they were introduced, thanks to the tireless advocacy of the environmental community and pushback from our allies in the legislature.

The legislature and the Governor faced a significant challenge starting in January with the announcement of a \$46 billion budget deficit. This tested California's commitment to environmental priorities and its ability to pass vital legislation. Several bills aimed at advancing the state's commitments to industrial decarbonization, clean energy, and water equity were held up by the appropriations committees due to funding challenges. Fortunately, the legislature maintained critical ongoing funding for environmental programs wherever possible and passed a \$10 billion Climate Bond, which voters will decide on as Proposition 4 during November's presidential election. Sierra Club California will work to ensure that the state's climate resilience and conservation commitments receive adequate funding.

However, the legislature struggled against deadlines during the last month of the session. Draft proposals aimed at undercutting permitting requirements, addressing utility price spikes, and more circulated in the final weeks of August. In response, the environmental community mobilized, and a coalition of 89 organizations, including Sierra Club California, submitted a letter urging against the abuse of the legislative process to rush through potentially harmful anti-environmental policies. Ultimately, Governor Newsom, Senate Pro-Tem McGuire, and Speaker Rivas moved forward with a

revised slate of proposals that addressed some concerns but were not without drawbacks. Due to legislative deadlines and time constraints, the bills that did progress faced an abbreviated legislative committee process, which lacked opportunities for incorporating feedback or amendments.

We applaud the legislature for responding to the strong environmental opposition by holding off on some of these proposals. Unfortunately, one of the late bills that passed and was signed into law by Newsom, AB 98, established insufficient standards that fail to safeguard communities from industrial pollution. The fight isn't over; we will be working closely with our allies to advocate for even stronger pollution protections in the next legislative session. Additionally, we will closely monitor the implementation and enforcement of these regulations, and watch for any efforts to circumvent them.

Newsom also called a special legislative session for August 31st, to address the rising cost of gas prices in California. We'll discuss this further in the Governor's section. Despite a challenging budget landscape and a whirlwind of activity during the final week of the legislative session, Sierra Club California and our allies fought to ensure that environmental concerns remained at the forefront of discussions. Many legislators faced difficult choices regarding California's environment and its communities, and this year's Report Card scores reflect those tough decisions.

As this year comes to a close and the Capitol prepares to welcome more than 30 new legislators in 2025, we are excited about the potential for environmental progress and the opportunity to build relationships with this new group of legislative leaders. Together, we will work to ensure that California remains a leader in climate and environmental justice issues.

## **Our Outgoing Environmental Champions**

Our perfect score accolade is given to legislators who vote with Sierra Club California on our scored environmental bills 100% of the time. Last year, a remarkable 22 Senators and 24 Assemblymembers received a perfect score.

This year's end-of-session rush and last minute bill amends meant that legislators were confronted with extremely difficult choices. This year, only two legislators received a perfect score: Thank you to Assemblymember Alex Lee and Speaker Emeritus Anthony Rendon. Assemblymember Lee has received 100% for four legislative years in a row, and Speaker Emeritus Rendon has been a stalwart champion for the environment during his tenure as Speaker.

Although only two legislators received a perfect score, we want to recognize several Assemblymembers and Senators who stood out as fierce environmental advocates this year. As Chair of the Natural Resources Committee, Assemblymember Isaac Bryan worked alongside Sierra Club California to make sure that many of our concerns with SB 1420 were addressed. Assemblymember Bauer-Kahan carried AB 460, a two year bill that would take a critical step to discourage unlawful water diversions. Assemblymember Addis authored AB 3233 to protect the right of California residents to protect public health and phase out oil and gas production in their communities. Assemblymember Zbur - who received a 100% score last year - unfortunately missed votes on four scorecard bills due to medical issues. Despite that, he was a solid environmental ally throughout the session. Finally, Senator Gonzalez steadfastly advocated for SB 252, a bill that would have the nation's largest pension funds, CalPERS and CalSTRS, divest from fossil fuel corporations. Though it was unable to find support in the Assembly Public Employment and Retirement committee, we are grateful for Senator Gonzalez's willingness to introduce the legislation again next year.

As many seasoned environmental champions prepare to leave the legislature this year, we want to highlight a few who have demonstrated a commitment to Sierra Club California's environmental priorities throughout their careers in the legislature.

### **Environmental Legacies:**

# Newsom and Environmentalists Struggle to Find Common Ground

This year, Governor Newsom doubled down on holding Big Oil accountable and reducing plastic pollution. In a significant legal move this September, California filed a lawsuit against ExxonMobil, accusing the oil giant of engaging in a decadeslong campaign that has fueled global plastic waste pollution and misled the public about the limitations of recycling. On the other hand, the Newsom administration continued to push through environmentally destructive water projects like the Delta Tunnel and Sites Reservoir.

Out of the 11 bills we scored this year, 9 reached Governor Newsom's desk. Of these, we supported 7 bills and opposed 2. The governor signed 6 of the bills we supported but vetoed 1. Unfortunately, he also signed both bills that Sierra Club California opposed. Based on this, the governor would receive a score of 66%.

As usual, we take a step back to tell the full story. Sierra Club California supported a total of 59 bills that landed on Governor Newsom's desk in 2024. He signed 47 and vetoed 12, including 2 from Sierra Club California's 2024 Priority Bill List. Of the 9 bills we opposed, Newsom vetoed 5. Taking these statistics into account, his actions aligned with the Sierra Club's position approximately 76% of the time.

Beyond the specific bills, the Newsom administration has continued to support environmentally harmful projects in the Delta. Last year, Newsom attempted to streamline the permitting process for the Sites Reservoir and Delta Tunnel projects. In November, he certified the Sites Reservoir for streamlined judicial review pursuant to SB 149. Newsom has claimed that this project is necessary for

California's water goals while ignoring the local, sustainable alternatives promoted by Sierra Club California, environmental justice advocates, and tribal groups. The Sites Reservoir and the Delta Tunnel will only exacerbate our state's water issues and significantly harm local ecosystems and tribal communities. This rift highlights just how far apart Newsom and environmental groups are on the Bay Delta.

It's also clear that Newsom hasn't learned any lessons from last year's session when he attempted to push through a suite of anti-environmental trailer bills at the last minute. This year, the administration backed several "gut-and-amend" bills that would have undermined wildfire planning, eliminated funding for renewable energy programs, and reformed refinery requirements without considering unintended consequences. We advise the governor to bring all interests to the table early in the legislative process.

For the second year in a row, Newsom has called for a special legislative session. While we always appreciate the opportunity for further policy discussion and incorporation of feedback from environmental groups, it is striking that, for two consecutive years, these important measures could not be addressed during the regular session. We commend Newsom for his support of crucial oil and gas reform bills like AB 3233 and AB 1866, but why does it seem that the governor is unable to engage environmental groups in discussions about his legislative priorities during the regular session? As we head into 2025, we hope that the Newsom administration will make more space and time to collaborate with the environmental community.

This year, Newsom has earned a C+. He has some of the right priorities in mind, but will need to focus on finding more common ground with the environmental community during the final two years of his tenure as governor.

Now that you know the score, take action!

<u>Tell your legislators you know the score</u>. Call their district offices and thank them if they scored well, or express disappointment if they didn't. Let them know you care about California's environment. You can find phone numbers for legislators at: www.senate.ca.gov or www.assembly.ca.gov. You can find out who your representatives are at: findyourrep.legislature.ca.gov.

<u>Take action on key legislation</u> when the 2025 session starts by signing up for Sierra Club California's in-district lobbying program: <u>www.sierraclub.org/california/district-advocacy</u>

Become a Sierra Club member on our website and sign up for our activist updates.

## 2024 Bill Summaries

Sierra Club California policy advocates select the bills that appear on the report card. The selection is based on factors that include a bill's overall importance to the state's environmental quality, the precedent it sets for good or bad impacts, and the bill's importance to fulfilling the Club's mission. We also consider what a bill's score reveals about environmental commitment in the legislature. This year, we scored 10 total bills: 5 that originated in the Assembly, and 5 from the Senate. When a bill returned to its house of origin for a concurrence vote, we used that vote.

## AB 98- Sets Dangerously Low Standards for Warehouse Sitings & Harms Local Communities

This bill sets dangerously low warehouse setback standards and fails to protect frontline communities of new and expanding facilities. Sierra Club California has supported warehouse setback reform in the past, but this bill sets a harmful precedent. **Oppose: Signed by Governor** 

#### SB 1420- Streamlines Permitting of Dirty Hydrogen Projects

This bill backtracks California's commitment to clean, renewable energy by streamlining the permitting of combustion-based "gray" hydrogen projects and the use of polluting hydrogen feedstocks including factory farm gas, biomass, and landfill gas. **Oppose: Signed by Governor** 

## SB 1390- Weakens Environmental Protection to Benefit Water Diversions

This bill would have weakened environmental protections for Delta communities, fish and wildlife, and exacerbated ecosystem decline caused by inappropriate reliance on unsustainable water diversions from the San Francisco Bay Delta. **Oppose: Held on the Assembly Floor** 

#### AB 3233- Ensures Local Authority to Phase Out Oil & Gas

This bill will protect the right of local governments to regulate and phase out oil and gas operations in their jurisdictions. It confirms that the state's oil and gas supervisor must prioritize the health and safety of Californians and protect the environment as the state moves toward a sustainable future. **Support: Signed by the Governor** 

#### SB 1374- Restores Rooftop Solar Benefits to Communities

This bill will restore the benefits of rooftop solar for schools, farms, and multi-family homes, by allowing them to share in the cost savings from the solar energy they are producing. **Support: Vetoed by the Governor** 

#### AB 1866- Holds Big Oil Accountable for Plugging Leaky Wells

This bill will help hold oil companies accountable for their legal and financial cleanup obligations of their dangerous idle oil wells, and help transition workers out of a declining industry by creating plugging and remediation jobs. **Support: Signed by the Governor** 

#### SB 1053- Minimizes Consumer Waste in Grocery Stores

This bill will close the loophole to California's plastic bag ban that allowed stores to sell thicker plastic film bags and would require stores to offer only paper bags at check out. **Support: Signed by the Governor** 

#### SB 59- Improves Grid Reliability through EV Batteries

This bill will aid in grid reliability by authorizing CARB to require that new EVs sold in California are capable of bidirectional charging, enabling EV batteries to power homes or other facilities when electricity demand is at its peak and prices are high. **Support: Signed by the Governor** 

#### AB 2552- Protection Against Harmful Anticoagulant Rodenticides

This bill will protect California's wildlife and biodiversity from exposure to pesticides by expanding the existing prohibition on the use of anticoagulant rodenticides near wildlife habitat areas. **Support: Signed by the Governor** 

## AB 2851- Safeguards Frontline Communities from Metal Shredding Pollution

This bill will provide transparency and precaution around the environmental impacts metal shredding facilities have on frontline communities by requiring all metal shredding facilities in California to install a fence line air monitoring system along with a notification system to neighboring communities. Support: Signed by the Governor

#### SB 1402- Advancing California's 30x30 Goals

This bill would have created greater accountability for State Agencies to advance California's 30x30 goals by requiring all state agencies to consider opportunities to enhance biodiversity and conserve 30% of lands and coastal waters by 2030 in relevant planning and decision-making processes. **Support: Held in Assembly Appropriations Committee** 

Report Card Legend and Notes
