**Extra credit** – the Office of Sustainability has published a **“Clean Energy Vision” for Philadelphia**. They are avoiding using the phrase “energy plan”. Instead they have several “playbooks” for achieving their goals. They are in a comment period now and are soliciting feedback. The point is, with Philadelphia making bold plans to transform their energy profile (even with a municipally owned gas co.), Philadelphia sets a great example for the surrounding municipalities to take similar steps. You can find the [document here](#) and [listen to a 30 minute presentation](#) from OOS manager Rich Freeh here along with the summary [slides that he talked from](#).
